

SAFETY TRAINING COURSE

Telehandler Forklift (Class 7)

DURATION

1 day

VALIDITY

3 years

PRICE

\$250

FORMAT

In-person

PRIVATE CLASS SIZE

6 to 10

Telehandler Forklift (Class 7) is a 1-day course for telehandler operators. You learn the regulations and standards that apply, the parts and classifications of a telehandler, hazard designations, the data plate, the load chart and stability. You learn how to start up, handle and place loads, travel, use ramps and grades, work around pedestrians, and shut down and refuel or recharge safely. You inspect your machine and the work area, work out equivalent loads from the load chart, and complete a practical operator evaluation. Certification follows successful completion of the training.

STANDARDS

CSA B335-15, Safety Standard for Lift Trucks

Course modules

01 Introduction

Legislation and Regulations · The Forklift Environment: Self-Audit

02 Forklift Principles and Requirements

Anatomy of a Forklift · Classifications · Hazard Designations · Operating Manual · Forklift features and safety equipment · Data Plate · Load Chart (Telehandler) · Stability · Your Forklift · Pre-Operation Inspection

03 Forklift Operation

Start-Up · Load Handling · Load pickup and placement · Travelling · Ramps and Grades · Pedestrians · Shutdown · Refueling or Recharging

04 Company Requirements and Evaluations

Company policies and procedures

Practical activities

Workplace inspection

A self-audit of the forklift environment, using the checklist in the manual.

Pre-use inspection

Visual checks of the telehandler on the operator's daily checklist, including the operator's manual and the load chart.

Pre-use function checks

The operational checks on the same checklist: power up, power disconnect, electrical safety devices, steering and steering modes, brakes and travel controls, parking brake, hydraulic controls, attachments, limit switches and battery charge.

Operator competency evaluation

A practical evaluation of 31 competencies in four categories: startup, travel, load engagement and disengagement, and shutdown. The evaluator marks each safe, unsafe or not applicable.

Equivalent load calculations and load chart use

Use the load chart to decide whether a load can be lifted, given its weight, load centre, equivalent load, distance and height.
